Flexi-Overdenture

Based upon a patented split-shank post, the ball and socket attachment delivers all the benefits of the Flexi-Post for highest retention of full and partial dentures. The attachment can be placed without lab assistance providing a simple, inexpensive overdenture at chairside. An overdenture that's supported by the split-shank Flexi-Post delivers maximum retention with minimal stress. The unique split-shank prevents root fracture, and absorbs stress by gradually closing during placement. Insertion is easier and cleaner because the split shank creates vertical blades which sweep debris into the split. Additionally, you get a better, more secure fit at the area where the canal widens because the Flexi-
